

SWASTHYA SANCHAR AI

AI-Powered Healthcare Communication & Guidance Assistant for Rural Communities

Team: Change_The_World

Members: Nafees Hyder, Prince Kumar

College: PES University | Contact: +91 9008802105

Focus: Rural Healthcare Accessibility

AI Core: Google Gemini 1.5 Flash/Pro + OCR

Multilingual: 12 Regional Indian Languages

SOLUTION OVERVIEW

Swasthya Sanchar is an AI-powered healthcare communication platform designed specifically for rural communities. The platform uses Optical Character Recognition (OCR) to extract information from handwritten prescriptions and medical documents. A Large Language Model (Google Gemini) analyzes the extracted medical information, simplifies complex terminology into patient-friendly language, translates the content into the patient's preferred regional language, and generates clear voice guidance. The system also creates medication schedules, sends reminder notifications, maintains digital health records, and supports ASHA workers and caregivers in monitoring treatment adherence. By combining AI, multilingual communication, and voice assistance, the platform ensures that every patient understands their treatment plan regardless of literacy or language barriers.

WHY THIS SOLUTION MATTERS

- Bridges the critical communication gap between doctors and rural patients.
- Improves medication adherence through automated voice reminders.
- Reduces medication errors caused by misunderstood prescriptions.
- Empowers ASHA workers with AI-assisted healthcare communication.
- Makes health information accessible in regional Indian languages.
- Promotes inclusive digital healthcare for underserved communities.

INNOVATION HIGHLIGHTS

- AI Simplifies** medical terminology instead of only translating it.
- OCR Extraction** from handwritten doctor prescriptions.
- Voice Guidance** supports low-literacy rural patients.
- Caregiver Alerts** improve medication adherence and safety.
- ASHA Worker Workflow** strengthens rural healthcare delivery.
- Personalized AI** follow-up recommendations & recommendations.

END-TO-END HEALTHCARE WORKFLOW

TARGET BENEFICIARIES

FUTURE SCOPE

- Offline mode for low-connectivity rural areas.
- WhatsApp integration for automated reminder alerts.
- Government Health Mission (ABDM) system integration.
- AI Chatbot for preventive healthcare awareness.
- Wearable health monitoring support for elderly patients.

EXPECTED MEASURABLE OUTCOMES

Healthcare Metric	Expected Outcome	Impact Goal
Healthcare Communication	Improved doctor-to-patient clarity	Eliminates medical jargon confusion
Medication Adherence	Increased by over 75%	Automated voice alerts prevent missed doses
Prescription Errors	Significantly Reduced	OCR + AI verification prevents dosage mistakes
Language Accessibility	Enhanced (12 Indian Languages)	Native voice audio for low-literacy patients
